

ABSTRACT OF THE DISCLOSURE

5

The system, method and program of the invention enhances the stop button on a Web page to enable a user to specifically select which included objects the user desires to stop downloading. More specifically, if during the 10 downloading of a Web page a user determines that the page is not loaded fully, the user enables the stop button (e.g., clicks on the stop button using a right mouse button). A popup window appears showing an identification of the included objects and a percentage amount that each object is 15 loaded. The user has an option to select from among the identified objects. In response to a selection, the downloading of a selected object will be stopped.
